Contents

Chapter 1 Fundamentals of Power Electronics **01-35**

1.1 Introduction to Power Electronics and Electric Mobility
1.2 Classification of Power Semiconductor Devices
1.3 Power Diodes, SCRs, MOSFETs and IGBTs
1.4 SiC and GaN Semiconductor Devices
1.5 Switching Characteristics and Gate Drive Circuits
1.6 Thermal Management and Protection Techniques
Case Study: Loss Budget of a 150 kW Traction Inverter
Additional Solved Problems
Chapter Summary
Review Questions and Problems

Chapter 2 AC–DC Converters and Rectifier Technologies **36-67**

2.1 Introduction to AC–DC Conversion
2.2 Single-Phase and Three-Phase Diode Rectifiers
2.3 Controlled Rectifiers Using Thyristors
2.4 Half-Wave and Full-Wave Converter Configurations
2.5 Power Factor Correction and Harmonic Analysis
2.6 Rectifier Applications in EV Charging Systems
Case Study: An 11 kW Three-Phase PFC Front End for a DC Fast Charger Module
Additional Solved Problems
Chapter Summary
Review Questions and Problems

Chapter 3 DC–DC Converter Technologies for Electric Vehicles **68-99**

3.1 Fundamentals and Classification of DC–DC Converters
3.2 Buck, Boost and Buck–Boost Converters
3.3 Isolated DC–DC Converter Topologies
3.4 Full-Bridge and Dual Active Bridge Converters
3.5 Bidirectional DC–DC Converter Configurations
3.6 Efficiency, Ripple Reduction and Voltage Regulation
Chapter Case Study: DC–DC Converters in an 800 V Passenger Vehicle
Chapter 3 Summary
Review Questions and Problems

Chapter 4 DC–AC Inverters and Power Conversion Systems **100-127**

4.1 Fundamentals of Voltage Source and Current Source Inverters
4.2 Single-Phase and Three-Phase Inverter Configurations
4.3 Sinusoidal and Space Vector PWM Techniques
4.4 Multilevel Inverter Topologies
4.5 Harmonic Reduction and Output Filter Design

4.6 Inverter Applications in EV Motor Drives
Chapter Case Study: The Traction Inverter of a 150 kW Vehicle
Chapter 4 Summary
Review Questions and Problems

Chapter 5 Electric Vehicle Powertrain and Motor Drive Systems **128-173**
5.1 Electric and Hybrid Electric Vehicle Architectures
5.2 Powertrain Components and Energy Flow
5.3 DC Motor and Brushless DC Motor Drives
5.4 Permanent Magnet Synchronous Motor Drives
5.5 Induction and Switched Reluctance Motor Drives
5.6 Torque–Speed Characteristics and Drive Performance

Chapter 6 Battery Management and Energy Storage Interface **174-220**
6.1 Battery Technologies for Electric Mobility
6.2 Battery Characteristics: SOC and SOH
6.3 Battery Management System Architecture
6.4 Battery Cell Balancing Techniques
6.5 Battery Protection and Thermal Management
6.6 Power Electronic Interfaces for Battery Energy Storage

Chapter 7 Electric Vehicle Charging Systems and Infrastructure **221-241**
7.1 Fundamentals of EV Charging Technologies
7.2 On-Board and Off-Board Charger Architectures
7.3 AC and DC Fast Charging Systems
7.4 EV Charging Standards and Connector Technologies
7.5 Wireless Power Transfer for Electric Vehicles
7.6 Smart Charging and Grid-to-Vehicle Systems
Chapter 7 Summary
Review Questions

Chapter 8 Regenerative Braking and Bidirectional Power Flow **242-263**
8.1 Principles of Regenerative Braking
8.2 Energy Recovery and Conversion Mechanisms
8.3 Bidirectional Converter Control Strategies
8.4 Vehicle-to-Grid and Vehicle-to-Home Technologies
8.5 Battery Charging and Discharging Management
8.6 Energy Optimisation and Power Flow Control
Chapter 8 Summary
Review Questions

Chapter 9 Control, Modelling and Simulation of EV Power Electronics **264-292**
9.1 Mathematical Modelling of Power Electronic Converters
9.2 Closed-Loop Voltage and Current Control

9.3 PI and PID Controller Design
9.4 Field-Oriented Control of Electric Motor Drives
9.5 Simulation Using MATLAB/Simulink and PLECS
9.6 Performance Analysis and Efficiency Optimisation

Chapter 10 Advanced Power Electronics and Emerging EV Technologies **293-329**
10.1 Wide Bandgap Semiconductor Technologies
10.2 High-Frequency and High-Efficiency Power Converters
10.3 Integrated Motor Drive and Power Converter Systems
10.4 Multiport Converters and Hybrid Energy Storage Systems
10.5 AI-Based Monitoring and Intelligent Power Management
10.6 Future Trends in Power Electronics for Electric Mobility
