CONTENTS

Chapter 1: Foundations of Quantum Computing **01-35**
- **1.1** Evolution of Computing: Classical to Quantum Computing
- **1.2** Need for Quantum Computing
- **1.3** History and Milestones of Quantum Computing
- **1.4** Classical Bits vs Quantum Bits (Qubits)
- **1.5** Applications of Quantum Computing

Chapter 2: Quantum Mechanics for Computing **36-67**
- **2.1** Principles of Quantum Mechanics
- **2.2** Superposition Principle
- **2.3** Quantum Entanglement
- **2.4** Quantum Measurement and State Collapse
- **2.5** Density Matrix and Mixed States

Chapter 3: Quantum Gates and Quantum Circuits **68-95**
- **3.1** Single-Qubit Gates (X, Y, Z, H, S, T)
- **3.2** Multi-Qubit Gates (CNOT, SWAP, Toffoli, Fredkin)
- **3.3** Quantum Circuit Design
- **3.4** Universal Quantum Gates
- **3.5** Quantum Circuit Optimization

Chapter 4: Quantum Algorithms **96-110**
- **4.1** Deutsch Algorithm
- **4.2** Deutsch–Jozsa Algorithm
- **4.3** Bernstein–Vazirani Algorithm
- **4.4** Grover's Search Algorithm

Chapter 5: Quantum Information Theory **111-132**
- **5.1** Quantum Information Concepts
- **5.2** Quantum Teleportation
- **5.3** Superdense Coding
- **5.4** Quantum Error Correction

Chapter 6: Quantum Machine Learning **133-157**
- **6.1** Fundamentals of Quantum Machine Learning (QML)
- **6.2** Quantum Data Encoding Techniques
- **6.3** Quantum Feature Maps
- **6.4** Variational Quantum Circuits

Chapter 7: Data Science Applications Using Quantum Computing **158-182**
7.1 Quantum Data Analytics
7.2 Quantum Principal Component Analysis (QPCA)
7.3 Quantum Support Vector Machines (QSVM)
7.4 Quantum Clustering Algorithms

Chapter 8: Industrial Applications of Quantum Computing **183-211**
8.1 Healthcare and Drug Discovery
8.2 Financial Modeling and Risk Analysis
8.3 Artificial Intelligence and Big Data Analytics
8.4 Cybersecurity and Post-Quantum Cryptography

References **212**
