TABLE OF CONTENTS

Chapter No.	Title	Page No.
1	**Fundamentals of Energy and Energy Systems**	**1-41**
	1.1 Introduction to Energy Physics	
	1.2 Forms, Units, and Classification of Energy	
	1.3 Conservation and Transformation of Energy	
	1.4 Energy Quality, Availability, and Efficiency	
	1.5 Global and Indian Energy Scenario	
	1.6 Energy and Sustainable Development	
2	**Thermodynamics and Energy Conversion**	**42-81**
	2.1 Fundamentals of Thermodynamic Systems	
	2.2 Zeroth and First Laws of Thermodynamics	
	2.3 Heat, Work, and Internal Energy	
	2.4 Second Law of Thermodynamics and Entropy	
	2.5 Carnot Cycle and Energy Conversion Efficiency	
	2.6 Exergy and Practical Engineering Applications	
3	**Energy Resources and Environmental Physics**	**82-118**
	3.1 Classification of Energy Resources	
	3.2 Fossil Fuels and Conventional Energy Sources	
	3.3 Renewable and Non-Renewable Energy Resources	
	3.4 Nuclear Energy Fundamentals	
	3.5 Greenhouse Effect and Climate Change	
	3.6 Environmental Impacts and Carbon Footprint	
4	**Solar Radiation and Solar Thermal Energy**	**119-158**
	4.1 Fundamentals of Solar Energy	
	4.2 Sun–Earth Geometry and Solar Radiation	
	4.3 Solar Radiation Measurement and Estimation	
	4.4 Flat-Plate and Concentrating Solar Collectors	
	4.5 Solar Thermal Power Generation and Applications	
	4.6 Thermal Energy Storage Systems	

5	**Photovoltaics and Semiconductor Energy Conversion**	**159-191**
	5.1 Semiconductor Fundamentals and Energy Bands	
	5.2 P–N Junction and Photovoltaic Effect	
	5.3 Solar Cell Construction and Working Principle	
	5.4 Solar Cell Characteristics and Efficiency	
	5.5 PV Modules, Arrays, and System Configuration	
	5.6 Applications and Emerging Photovoltaic Technologies	
6	**Wind, Hydro, and Ocean Energy Systems**	**192-227**
	6.1 Fundamentals of Wind Energy	
	6.2 Wind Turbine Principles and Components	
	6.3 Wind Power Extraction and Performance	
	6.4 Hydropower Principles and Hydraulic Turbines	
	6.5 Tidal and Wave Energy Conversion	
	6.6 Ocean Thermal Energy and Grid Integration	
7	**Bioenergy, Geothermal, and Nuclear Energy**	**228-263**
	7.1 Fundamentals of Bioenergy and Biomass	
	7.2 Biomass Conversion Technologies	
	7.3 Biogas, Biofuels, and Their Applications	
	7.4 Geothermal Energy Resources and Systems	
	7.5 Nuclear Fission, Fusion, and Reactor Physics	
	7.6 Safety, Waste Management, and Environmental Considerations	
8	**Electrochemical Energy, Hydrogen, and Fuel Cells**	**264-303**
	8.1 Fundamentals of Electrochemical Energy Systems	
	8.2 Battery Technologies and Energy Storage Principles	
	8.3 Lithium-Ion, Sodium-Ion, and Flow Batteries	
	8.4 Supercapacitors and Battery Management Systems	
	8.5 Hydrogen Production, Storage, and Transportation	
	8.6 Fuel Cell Principles and Sustainable Applications	
9	**Energy Efficiency, Smart Systems, and Sustainable Engineering**	**304-344**
	9.1 Fundamentals of Energy Efficiency and Conservation	
	9.2 Energy Auditing and Demand-Side Management	

	9.3 Energy-Efficient Buildings and Thermal Systems	
	9.4 Heat Pumps, Waste Heat Recovery, and Cogeneration	
	9.5 Smart Grids, Microgrids, and Distributed Generation	
	9.6 Electric Mobility and Digital Energy Systems	
10	**Energy Storage, Life-Cycle Assessment, and Future Energy Pathways**	**345-402**
	10.1 Classification of Energy Storage Technologies	
	10.2 Thermal, Mechanical, and Chemical Energy Storage	
	10.3 Life-Cycle Assessment of Energy Systems	
	10.4 Techno-Economic and Environmental Evaluation	
	10.5 Circular Economy and Sustainable Energy Materials	
	10.6 Future Energy Technologies and Integrated Case Studies	
	Reference	**403-404**
