TABLE OF CONTENTS

Chapter no.	Title	Page no.
1	**Fundamentals of Engineering Optimization**	**1-26**
	1.1 Introduction to Optimization and Engineering Decision-Making	
	1.2 Mathematical Formulation of Optimization Problems	
	1.3 Classification of Optimization Problems	
	1.4 Objective Functions, Constraints and Design Variables	
	1.5 Feasible Solutions and Optimality Concepts	
	1.6 Engineering Applications of Optimization	
2	**Linear Programming Techniques**	**27-53**
	2.1 Introduction to Linear Programming	
	2.2 Formulation of Linear Programming Problems	
	2.3 Graphical Solution of Linear Programming Problems	
	2.4 Simplex Method	
	2.5 Big-M and Two-Phase Methods	
	2.6 Duality and Sensitivity Analysis	
3	**Transportation, Assignment and Network Optimization**	**54-83**
	3.1 Transportation Problem and Mathematical Formulation	
	3.2 Initial Basic Feasible Solutions	
	3.3 Optimality Tests for Transportation Problems	
	3.4 Assignment Problem and Hungarian Method	
	3.5 Shortest Path and Minimum Spanning Tree Problems	
	3.6 Maximum Flow and Network Optimization Applications	
4	**Unconstrained Optimization Techniques**	**84-114**
	4.1 One-Dimensional Optimization Methods	
	4.2 Interval Elimination Methods	
	4.3 Golden Section and Fibonacci Search	
	4.4 Multivariable Optimization Methods	
	4.5 Steepest Descent and Conjugate Gradient Methods	
	4.6 Newton and Quasi-Newton Methods	

5 **Constrained Nonlinear Optimization** **115-145**
5.1 Introduction to Nonlinear Programming
5.2 Equality and Inequality Constraints
5.3 Lagrange Multiplier Method
5.4 Karush–Kuhn–Tucker Conditions
5.5 Penalty and Barrier Methods
5.6 Engineering Applications of Nonlinear Optimization

6 **Convex and Quadratic Optimization** **146-175**
6.1 Convex Sets and Convex Functions
6.2 Convex Optimization Problems
6.3 Optimality Conditions in Convex Optimization
6.4 Quadratic Programming
6.5 Interior-Point Methods
6.6 Engineering Applications of Convex Optimization

7 **Integer and Dynamic Optimization** **176-204**
7.1 Integer Programming and Binary Optimization
7.2 Mixed-Integer Programming
7.3 Branch and Bound Method
7.4 Dynamic Programming Concepts
7.5 Principle of Optimality and Recursive Optimization
7.6 Engineering Applications of Integer and Dynamic Programming

8 **Evolutionary and Swarm Optimization** **205-238**
8.1 Introduction to Evolutionary Optimization
8.2 Genetic Algorithms
8.3 Genetic Operators and Algorithm Design
8.4 Simulated Annealing
8.5 Particle Swarm Optimization
8.6 Engineering Applications of Evolutionary and Swarm Methods

9 **Multi-Objective, Stochastic and Robust Optimization** **239-278**
9.1 Multi-Objective Optimization Concepts
9.2 Pareto Optimality and Pareto Frontiers
9.3 Goal Programming and Multi-Criteria Decision-Making
9.4 Stochastic Optimization

9.5 Robust Optimization and Optimization Under Uncertainty
9.6 Reliability-Based Engineering Optimization

10 **Computational Optimization and Engineering Applications** **279-316**
10.1 Optimization Using MATLAB and Python
10.2 Numerical Optimization Solvers and Computational Tools
10.3 Optimization in Manufacturing and Production Systems
10.4 Optimization in Energy, Transportation and Communication Systems
10.5 Optimization in Robotics, Control and Structural Engineering
10.6 Emerging Trends in Intelligent and Sustainable Engineering Optimization

Reference **317-319**
